

Data Documents

a CQRS-style approach for managing data redundancy “the good way”

by Julian Scheuchenzuber @ StripeCon EU 2023

Case Study **HealthMe App**
presented on German television show
“Die Höhle der Löwen” in 2021

Do you know which food is good for you?

- 📍 Food screening based on original manufacturer data - tested data quality
- 📍 Including analysis of additives
- 📍 Tailored to your allergy/intolerance profile
- 📍 Automatic integration of results from medical laboratory tests (allergy or intolerance tests)
- 📍 Enter personal preferences (if desired)

Download now for free

Our goals

-  Visibility for our product
-  Push sales of our bundle-products
-  Distribute ad content from our partners
-  App user conversions (paid subscriptions)
-  Close an investor deal

Challenges and Risks

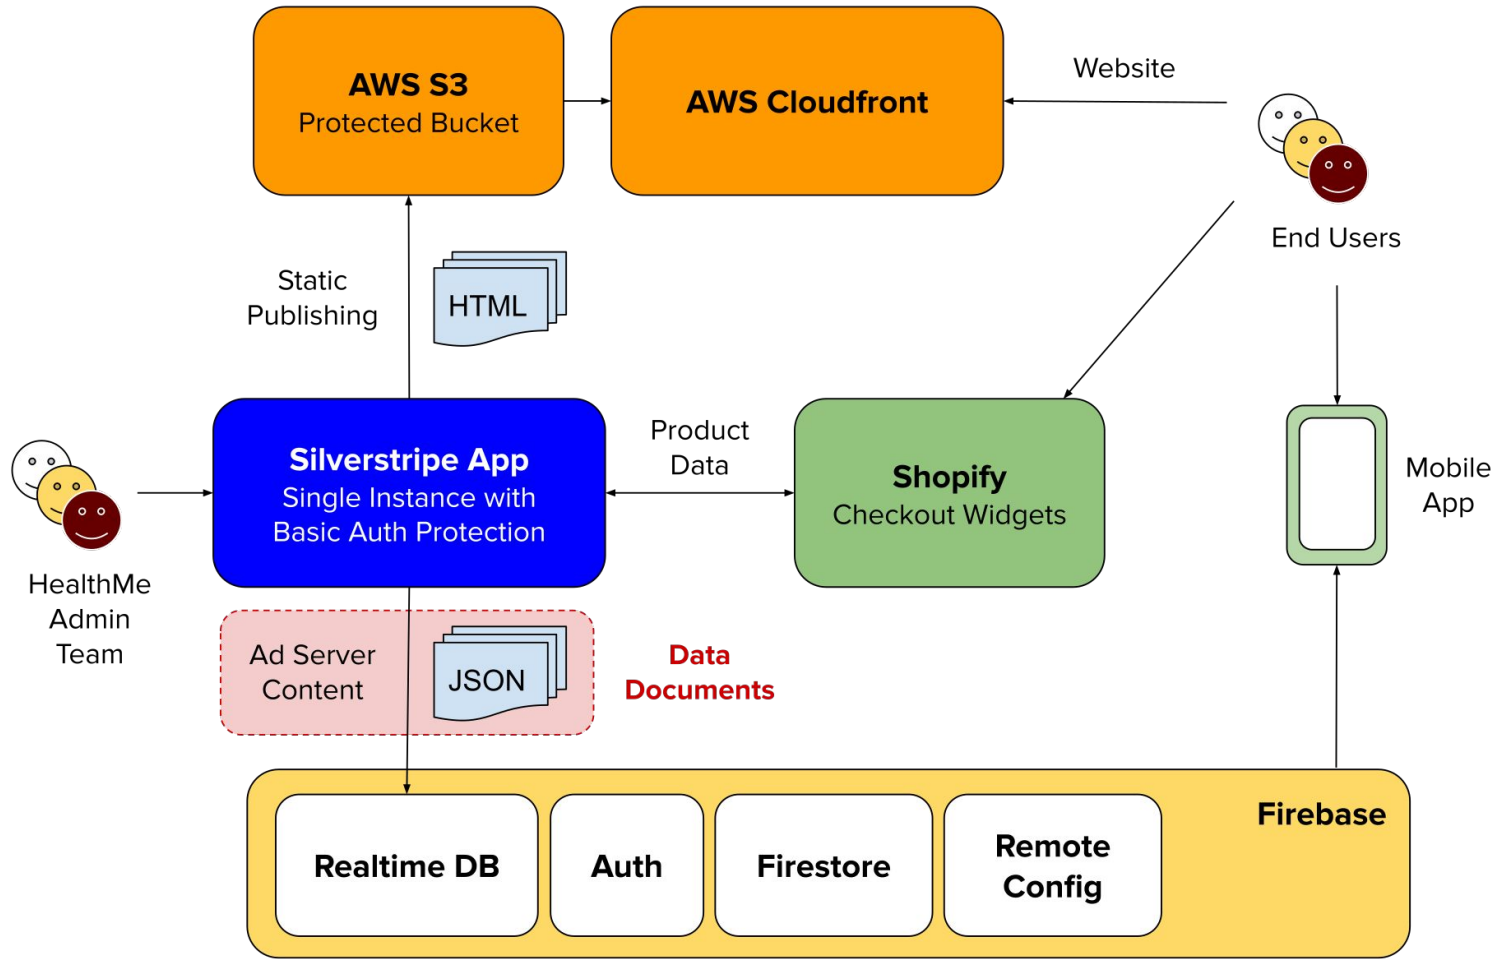

High load/traffic during TV show airing

Easy and stable purchase flows

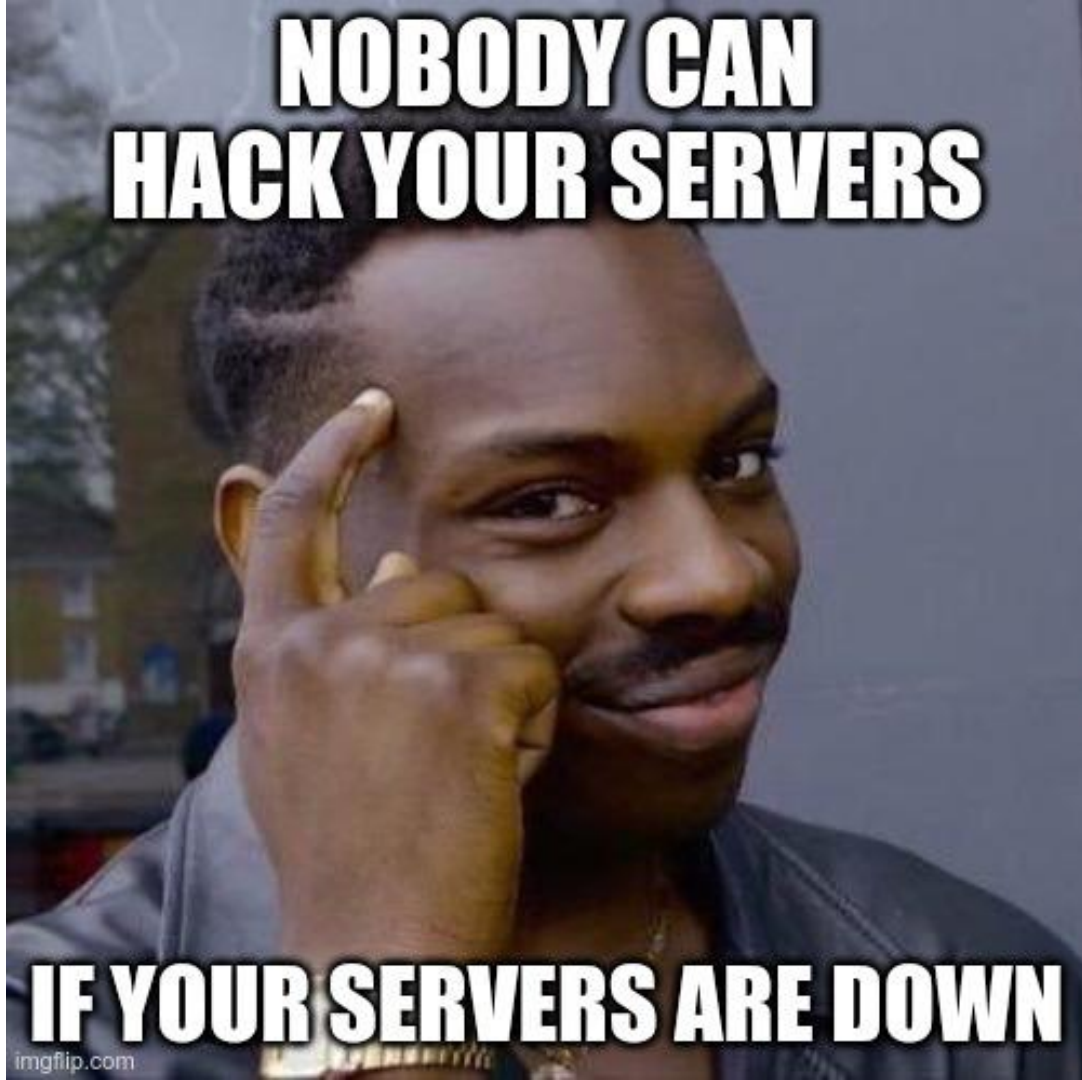

Trolls try to attack and break your systems

So we... shut down our servers
during the tv show 🤯

**NOBODY CAN
HACK YOUR SERVERS**

IF YOUR SERVERS ARE DOWN

CQRS

[Original description](#) by Greg Young

Data Documents Recipe

Step 1

Create an adapter for your payload store (Elastic, Redis, ...)

Step 2

Implement interface `DataDocument` in your `DataObject`

Step 3

Success! ✨

Data Documents Snippets

```
1 <?php
2
3 namespace Level51\DataDocuments;
4
5 interface DataDocumentStore
6 {
7     public function read(string $documentId): array;
8
9     public function write(string $documentId, array $document, array $options = []): void;
10
11     public function delete(string $documentId): void;
12 }
13
```

Data Documents Snippets

```
1 <?php
2
3 namespace Level51\DataDocuments;
4
5 interface DataDocument
6 {
7     public function getDocument(): array;
8
9     public function getDocumentStore(): DataDocumentStore;
10 }
11
```

Data Documents Snippets

```
1 <?php
2
3 use Level51\DataDocuments\DataDocument;
4 use Level51\DataDocuments\DataDocumentExtension;
5 use SilverStripe\Core\ClassInfo;
6 use SilverStripe\ORM\DataObject;
7
8 foreach (ClassInfo::implementorsOf(DataDocument::class) as $dataDocumentClass) {
9     DataObject::add_extension($dataDocumentClass, DataDocumentExtension::class);
10 }
11
```

Data Documents Snippets

```
1 <?php
2
3 namespace Level51\DataDocuments;
4
5 use SilverStripe\ORM\DataExtension;
6
7 /**
8  * @property DataDocument|DataDocumentExtension $owner
9  */
10 class DataDocumentExtension extends DataExtension
11 {
12     public function onAfterWrite() {}
13
14     /**
15      * Used to ensure data is being committed if only relations have been changed
16      */
17     public function onAfterSkippedWrite() {}
18
19     public function onBeforeDelete() {}
20
21     public function commit(): void {}
22
23     public function undoCommit(): void {}
24
25     public function getDocumentId(): string {}
26 }
27
```

Demo Time 😎

What we are up to

Dependency Tree Detection via SPL

Support for 3rd party DataObject

Basic library of payload store adapters

Documentation of API and concepts

**Github Repo
in the making**
